Range expansion at the Heilbronn plant

CONVERSION TO GMO-FREE CATTLE FEED PRODUCTION

09.09.2020 – Since the beginning of September, all cattle feed from our plant in Heilbronn is also available without genetically modified components. The expansion of our production at the site complements our product range and creates an additional contact point for our agricultural trade partners. GMO-free products for cattle are now available at all our plants in Bavaria and Baden-Württemberg.

This means that all farms producing food that is certified according to VLOG (Verband Lebensmittel ohne Gentechnik e. V.) can now purchase their feed in Heilbronn. This shortens delivery routes and adds a valuable option to our range of feeds. The first agricultural traders have already purchased GMO-free cattle feed at the beginning of September.

Acceptance of first GMO-free cattle feed by a long-standing agricultural trader.
