

BREEDING MUESLI

Protein-rich muesli for broodmares, foals and stallions

- deukavallo Zuchtmüsli is a high-protein muesli feed for foals, broodmares and as a supplement for stallions in breeding.
- Its high-quality nutrient orientation serves to optimise the breeding condition.
- Valuable proteins promote a high milk production in mares.
- In addition, the special mineralisation supports the healthy development of your foals.
- The high palatability encourages early feed intake of the foals.

Ingredients

Crude fibre	8,20 %
Crude fat	4,10 %
Crude protein	17,50 %
Crude ash	7,50 %
Calcium	1,50 %
Phosphorus	0,60 %
Sodium	0,25 %
Magnesium	0,30 %
Lysine	0,80 %
Starch	26,00 %
Sugar	5,90 %

For individual values, there may be slight deviations in content between the supplier plants.

List of ingredients

Oats, barley flakes, maize flakes, soya extruded meal (steam fer.), ZR molasses, oat hull bran, soybeans (expanded), sunflower extraction meal, flax extraction meal, wheat bran, crushed carob, calcium carbonate, alfalfa meal, maize, molasses pulp, dicalcium phosphate, milk thistle oil, sodium chloride, carrots (dried), magnesium oxide, beetroot (dried)

Vitamins

Vitamin A	25.000 I.U./kg
Vitamin D3	1.500 I.U./kg
Vitamin E	300.00 mg/kg
other water soluble vitamins	

For individual values, there may be slight deviations in content between the supplier plants.

Trace elements

Iron	55.00 mg/kg
Iodine	1.10 mg/kg
Copper	22,00 mg/kg
Manganese	88.00 mg/kg
Selenium	0.50 mg/kg
Zinc	139.00 mg/kg

For individual values, there may be slight deviations in content between the supplier plants.

Feeding recommendation

Feeding the broodmare:

High-protein breeding muesli for foals, broodmares and stallions

Feeding recommendation for broodmares (per 100 kg body weight and day)* Consisting of 2/3 deukavallo Breeding Muesli 1/3 basic manger feed or oats)

Month of pregnancy	8	9 –10	11
Total cot feed	approx. 0.35-0.45	approx. 0.45-0.60	approx. 0.60-0.75

Lactation month	1. 2. **	3.	from 4th month
deukavallo Breeding Muesli kg per 100 kg body weight and day	0,80-1,10	0,80-0,60	approx. 0,50

Feeding of the stallion*:

During mating, the requirement corresponds approximately to a mare in the 8th month of pregnancy. If

necessary, compensate for energy deficits with oats. The requirement of stallions outside the breeding season is based on the respective work performance.

*Considered amount of roughage per day: approx. 1.5 kg hay per 100 kg body weight. Depending on the quality of the roughage, temperament, physical condition and feed conversion, it may be advisable to adjust the feed quantities. In case of low dosage, we recommend the addition of a mineral feed. Divide the total daily amount over several meals. Always offer fresh drinking water.

**Increase the indicated feed quantity for the 1st 2nd lactation month (lactation peak) step by step after birth. Until weaning, gradually phase out the amount of deukavallo Breeding Muesli and reduce the amount of crèche feed to the maintenance requirement.

Recommended amount of roughage per day: at least 1.0 - 1.5 kg hay/ 100 kg body weight

Feeding of the foal:

Recommended crèche feed quantity per animal and day in addition to mare's milk, hay and pasture*:

Age of foal	1 month	2-3 months	4-6 months	7-12 months
deukavallo Breeding Muesli	feed	0,50 kg	0,75 - 1,00 kg	0,85 - 0,65 kg

* For a warm-blooded foal with a final weight of 550-600 kg (ponies and small horses correspondingly less). Depending on the grass growth and grazing duration, reduce the amount of cot feed.

Development of the live mass of growing horses in % of the expected live mass of the adult horse.

Time/ month of life (end)	light breeds	heavy breeds
Birth	10,6	10,6
2	25	25
4	36	34
6	45	42
12	65	58
18	79	68
24	88	76
36	98	84
