

DEUKA LAYING MEAL / LAYING GRAIN

Supplementary feed for laying hens

- deuka laying meal as a structured meal and deuka laying grain as a pellet supplement cereal-based rations for laying hens with protein (= egg white) and calcium for egg shell formation.
- The combined feeding of laying meal / laying grain with cereals, deuka grain extra or deuka grain deluxe results in a complete ration.
- In this way, you can ensure that your laying hens are supplied according to their needs for a sustainable laying activity.
- Laying meal / laying grain contain high-quality protein and important amino acids as well as all the necessary vitamins, trace elements and minerals for good egg quality.

Ingredients

Laying meal

Crude protein	19,00%
Crude fat	4,30%
Crude fibre	3,30%
Crude ash	17,10%
Calcium	5,00%
Phosphorus	0,60%
Sodium	0,30%
Lysine	0,95%
Methionine	0,40%

Laying grain

Crude protein	19,00%
Crude fat	3,30%
Crude fibre	4,80%
Crude ash	15,70%
Calcium	5,00%
Phosphorus	0,60%
Sodium	0,30%
Lysine	0,95%
Methionine	0,40%

Vitamins

Vitamin A	13.500.00 I.U./kg
Vitamin D3	3.750.00 I.U./kg
Vitamin E	30.00 mg/kg

The information on vitamins, trace elements and feeding recommendations is identical for all products listed here.

For individual values, there may be slight deviations in content between the supplier plants.

Trace elements

Iron	38.00 mg
Iodine	0.60 mg
Copper	11.00 mg
Manganese	150.00 mg
Selenium	0.45 mg
Zinc	90.00 mg

The information on vitamins, trace elements and feeding recommendations is identical for all products listed here.

For individual values, there may be slight deviations in content between the supplier plants.

Feeding recommendation

Supplementary feed for laying hens.

Feed in a ratio of 2:1 with Grains Extra, Grains Deluxe or cereals two weeks before the start of and during the laying period. Towards the end of the laying period (shortly before moulting) and also generally for older laying hens, supplementary feeding of oyster shells in a separate feed container can be useful.

Ideally, laying meal / laying grain should be fed in the morning before the laying period and grain feed in the evening. The daily requirement for a modern laying hen (hybrid with approx. 1.5 kg body weight) is approx. 120 grams per bird per day. This means 80 g of laying meal/legged grain plus 40 g of grain feed per bird and day.

Always provide fresh drinking water.
